Automatic text summarisation aims to produce a brief but comprehensive version of one or multiple documents . Extractive abstractive summarisation involves selecting key sentences from the original document . </s>
Automatic text summarisation aims to produce a brief but comprehensive version of one or multiple documents , highlighting the most important information . There are two main summarisation techniques : extractive and abstractive . Extractive summarisation involves selecting key sentences from the original document , while abstractive summarisation involves creating new language based on the important information and requires a deeper understanding of the content . </s>
